## Education

King Mongkut's Institute of Technology  
Ladkrabang (KMITL)

B.S. Information Technology  
(Software Development)

2022 – 2026 | GPA: 2.96

## Skills

### Frontend

- HTML, CSS, TypeScript, React, Next.js, Tailwind CSS

### Backend

- Python, Django, PHP, REST API, Prisma, Odoo

### Database

- PostgreSQL, MySQL, SQL, ERD Design

### Tools & DevOps

- Git / GitHub, Docker, Postman, AWS (EC2, S3), DBeaver, pgAdmin

## Languages

- Thai (Native), English (Intermediate)

## Certifications

- HCCDA – Huawei Cloud Developer Certification (Tech Essentials)

## About Me

IT graduate from KMITL with hands-on experience building full-stack web systems end-to-end — from ERD design and backend APIs to deployment. Led development of a budget management platform built for faculty administrators, using Next.js and PostgreSQL. Comfortable owning both frontend and backend layers, and looking to bring that full-cycle ownership to a collaborative development team.

## Projects

**Budget Preparation Support System** | Aug 2025 — March 2026

*Final Year Project | Full-stack Developer*

- **Led** 2-person team as system designer and project coordinator, managing timelines and stakeholder communication with faculty advisors.
- **Architected** system structure and database schema (ERD), and developed custom Odoo modules in Python for Excel-to-budget conversion, income/expense workflows, and authentication — deployed to a faculty test server and validated with 3 administrative users (faculty staff and an advisor).
- **Developed** budget planning dashboard and financial reporting UI, reducing manual cross-department data consolidation via a centralized platform built with Next.js, Tailwind CSS, Odoo, and PostgreSQL (BFF architecture).

**Game Vault** | Jan 2025 — May 2025

*Full-stack Developer* | [github.com/gustsri/game-vault](https://github.com/gustsri/game-vault)

- **Co-developed** full-stack game discovery platform in a 2-person team, building home page, game detail pages, and commenting system using Next.js, TypeScript, Prisma, and PostgreSQL.
- **Integrated** RAWG REST API to fetch and render game data dynamically across detail pages.
- **Built** social account system with game favorites, public user profiles, and cross-user liked games browsing.

**Accounting and Store Management System** | Aug 2024 — Dec 2024

*Backend Developer* | [github.com/gustsri/ServerSide\\_project-main](https://github.com/gustsri/ServerSide_project-main)

- **Designed** database architecture (ERD) and developed inventory management modules using Python, Django, and PostgreSQL — product listing, lot management, and real-time stock tracking.
- **Implemented** role-based access control for secure multi-user employee account management.
